

Lesson 6 : ADULT CPR / AUTOMATED EXTERNAL DEFIBRILLATOR

75 Minutes

At the end of this lesson, the student will be able to:

- Understand the chain of survival interventions.
- Recognize when to provide CPR.
- Provider high quality CPR
- Provide an effective ventilation.
- Use the AED safely.

Instructor Role: The instructor will discuss through PowerPoint Presentation

- CPR
- Chain of survival
- Assessment

Assessment (Instructor demonstration and Student Practice)

- Demonstrate to the student how to assess the scene and the victim
- Observe the students and give positive feedback
- Assess the scene, and the victim by tapping the shoulder, calling for help
- Check breathing for at least 5 seconds but not more than 10 seconds

Continue the PowerPoint presentation

- Key points of High-quality CPR in adult

High-quality CPR (Instructor demonstration and Student Practice)

- Demonstrate to the students how to do High-quality CPR
- Observe the students and give positive feedback
- Students will practice 3 cycles of compression
- Heel of palm at the center of the chest
- With elbows straight and shoulders directly above the hands
- Push hard and fast with 100-120 rate per minute
- Allow complete chest recoil
- Proper depth of 2 inches

Continue the PowerPoint Presentation

- Opening the airway
- Giving breath with a pocket mask

Giving Breaths with a pocket mask (Instructor demonstration and Student Practice)

- Demonstrate to the students how to give breaths using the pocket mask
- Observe the students and give positive feedback
- Students will practice 3 (2) breaths with a pocket mask
- Open the airway by head tilt chin lift
- Seal the pocket mask
- Give 2 breaths effectively

Instructor's Notes:

.....

.....

AED USE

Instructor Role:

The instructor will discuss through PowerPoint presentation

- Steps in AED use
- Special considerations in AED

AED use (Instructor demonstration and Student Practice)

- Demonstrate to the students how to use the AED
- Tell them that the AED is only a trainer and it will not give a shock
- Observe the students and give positive feedback
- Students will practice how to use the AED in adult
- Turn it on and follow the prompt of the AED

Combining all together (Instructor demonstration and Student Practice)

- Demonstrate to the students the whole scenario with AED use
- Observe the students and give positive feedback
- Students will practice the whole CPR scenario with the use of AED

Test: Adult CPR with AED use

- Inform the students that they are not allowed to ask questions during the testing
- Test students one by one
- Do not coach or demonstrate the skills during testing

Remediation

Review the critical actions that were not performed or incorrectly performed

Practice the skills if needed

Remediate the student

Instructor's Notes:

Lesson 7 CHILD CPR

30 Minutes

At the end of this lesson, the student will be able to:

- Understand the pediatric chain of survival interventions.
- Recognize when to provide CPR for a child.
- Provider high quality CPR for a child.
- Provide effective ventilation for a child.

Instructor Role: The instructor will discuss through PowerPoint presentation

- Assessment
- High-Quality CPR
- Giving breath

Combining all together (Instructor demonstration and Student Practice)

- Observe the students and give positive feedback
- Students will practice the whole CPR scenario with the child

Test: Child CPR

- Inform the students that they are not allowed to ask questions during the testing
- Test students one by one
- Do not coach or demonstrate the skills during testing

Remediation

Review the critical actions that were not performed or incorrectly performed

Practice the skills if needed

Remediate the student

Lesson 8 INFANT CPR

45 Minutes

At the end of this lesson, the student will be able to:

- Understand the pediatric chain of survival interventions.
- Recognize when to provide CPR for a child.
- Provider high quality CPR for a child.
- Provide effective ventilation for a child.

Instructor Role: The instructor will discuss through PowerPoint presentation

Assessment

Assessment (Instructor Demonstration Student Practice)

- Observe the students and give positive feedback
- Assess the scene, and the victim by tapping the sole, calling for help
- Check breathing for at least 5 seconds but not more than 10 seconds

Continue the PowerPoint presentation

- Key points of High-quality CPR in infant

High-quality CPR (Instructor Demonstration and Student Practice)

- Observe the students and give positive feedback
- Students will practice 3 cycles of compression
- Two fingers /2 thumbs chest compression just below the nipple line
- Push hard and fast with 100-120 rate per minute
- Allow complete chest recoil
- Proper depth of 1 ½ or 4 centimeters inches

Continue the PowerPoint presentation

- Opening the airway
- Giving breath with a pocket mask

Combining all together (Instructor Demonstration and Student Practice)

- Observe the students and give positive feedback
- Students will practice the whole CPR scenario with the infant

Test: Infant CPR

- Inform the students that they are not allowed to ask questions during the testing
- Test students one by one
- Do not coach or demonstrate the skills during testing

Remediation

Review the critical actions that were not completed and incorrectly performed

Practice the skills if needed

Remediate the student

Course Conclusion

- Summarize what the students learned during the course
- Thank the students

Lesson 9 ADULT AND INFANT CHOKING

25 Minutes

At the end of this lesson, the student will be able to:

- Understand the differences between partial and complete airway obstruction
- Provide abdominal thrust properly.
- Relief choking for infant victims.

Instructor Role: The instructor will discuss through PowerPoint presentation

Foreign body airway obstruction in adult

Assessment (Instructor Demonstration and Student Practice)

- Observe the students and give positive feedback
- Make a fist of one hand and put it above the navel
- Grasp the fist with the other hand and make a forceful abdominal thrust until the object comes out

Continue the PowerPoint Presentation

- Foreign body obstruction in an infant

Assessment (Instructor Demonstration and Student Practice)

- Observe the students and give positive feedback
- Place the infant in a prone position supported by the forearm and head is lower than the chest
- Give five back blows in between shoulder blades
- Turn the infant into a supine position supporting the head and give five chest thrust
